## State: MAHARASHTRA

## **Agriculture Contingency Plan for District: <u>AHMEDNAGAR</u>**

1.0	District Agriculture profile							
1.1	Agro-Climatic/Ecological Zone							
	Agro Ecological Sub Region (ICAR)	Deccan Plateau, Hot Semi-Arid Eco-Region (6.1)						
	Agro-Climatic Region (Planning Commission)	Western Plateau and Hills Region (IX)						
	Agro Climatic Zone (NARP)  Western Maharastra Scarcity Zone (MH-6)							
	ist all the districts or part thereof falling under the NARP Zone  Scarcity Zone: Sangli, Nandurbar, Nasik, Dhule, Ahmednagar, Pune							
	Geographic coordinates of district headquarters	0 7	Latitude	Longitude	Altitude			
		19	°04'58.96" N	74°45'09.54" E	715.3 m MSL			
	Name and address of the concerned ZRS/ ZARS/ RARS/ RRS/ RRTTS	ZARS, Krishak Bhavan, Near DAV College, Solapur, Pin 413001						
	Mention the KVK located in the district	Krishi Vidyan Kendra, Babhaleshwar (PIRENS) Tal: Rahata, Dist: Ahmedna						
1.2	Rainfall	Normal RF (mm)	Normal Rainy days (number)	Normal Onset	Normal Cessation			
	SW monsoon (June-Sep):	419.0	25	2 <sup>nd</sup> week of June	3 <sup>rd</sup> week of October			
	NE Monsoon(Oct-Dec):	111.7	14	-	-			
	Winter (Jan- Feb)	8.1	5					
	Summer (March-May)	22.8	-					
	Annual	561.6	44					

1.3	Land use pattern of the district	Geographical urea	Cultivable area		Land under non – agriculture use		Cultivable wasteland	Land under misc. tree, crops and	Barren and uncultivable land		Other fallows
								grooves			
	Area ('000 ha)	1702.0	1146.3	163.4	13.9	41.7	19.1	3.4	131.0	89.4	93.8

(Source: Agricultural Statistical Information, Maharashtra State 2006 (Part II))

1. 4	Area ('000 ha)
Major Soils	389.4
Shallow grey soils	142.7
Medium deep black soils	112,7
Deep black soils	63.4

(Source : Strategic research and extension plan of Ahmednagar District)

1.5	Agricultural land use	Area ('000 ha)	Cropping intensity %
	Net sown area	1146.3	131.7
	Area sown more than once	363.4	
	Gross cropped area	1509.7	

6 Irrigation	Area ('000 ha)		
Net irrigated area	330.0		
Gross irrigated area	362.0		
Rainfed area	816.3		
Sources of Irrigation	Number	Area ('000 ha)	Percentage of total irrigated area
Canals	2	84.0	25.4
Tanks	-	-[-	-
Open wells	153138	246.0	74.5
Bore wells	121	11	-
Lift irrigation schemes	-		-
Micro-irrigation		10	-
Other sources (please specify)		96" -	-
Total Irrigated Area	- 1	330	100
Pump sets	15373	-	-
No. of Tractors	11645	-	-
Groundwater availability and use* (Data source: State/Central Ground water Department /Board)	No. of blocks/ Tehsils 14	(%) area	Quality of water (specify the problem such as high levels of arsenic, fluoride, saline etc)
Over exploited	-		-
Critical	5	Good	-
Semi- critical	1	Good	-
Safe	8	Good	-
Wastewater availability and use	-		-
Ground water quality	-	Salty	-

### 1.7 Area under major field crops & horticulture (2008-09)

Sr.	Major field		Area ('000 ha)								
			Kharif			Rabi			Summer		
No.	crop	Irrigated	Rainfed	Total	Irrigated	Rainfed	Total	Summer	Grand total		
	Rabi Sorghum	-	-	-	-	507.2	507.2	-	507.2		
	Wheat	-	-	-	138.2	-	138.2	-	138.2		
	Sugar cane		-	-	113.7				133.7		
	Pearlmillet	-	128.2	128.2	- W	-	-	-	128.2		
	Chickpea	-	-	- 3	11		90.5		90.5		
	Soybean	-	55.5	55.5		-	-	-	55.5		
	Horticulture crops - Fruits	Area ('000 ha)									
			Total								
	Pomegranate		6.4								
	Kagzi Lime		6.1								
	Guava		- 0			4.2					
	Mango	1	3.5								
	Sapota					3.1					
	Horticulture crops - Vegetables	60	Total								
	Onion	C 17	0			51.0					
	Tomato				3.7						
	Pea		2.4								
	Brinjal					2.3					
	Chilli		1.7

Condition			Suggested contingency measures				
Mid season drought (long dry spell, consecutive 2 weeks rainless (>2.5 mm) period)		Normal crop/ cropping system	Crop management	Soil nutrient & moisture conservation measure	Remarks on Implementation		
At vegetative stage	Shallow grey soils	Pearlmillet		Hoeing/Weeding Use of 8 % kaolin spray	-do-		
	Medium deep black soils	Soybean	Protective irrigation	2 % urea spray, Hoeing and weeding			
		Maize	-do-	-do-			

	Onion	-do-	2% urea spray	
Deep bla	sck soils Soybean	-do-	-do-2 % urea spray, Hoeing and weeding	
	Onion	-do-	-do-	

Condition			Suggested contingency measures				
Mid season drought (long dry spell)	Major Farming situation	Normal crop/cropping system	Crop management	Soil nutrient & moisture conservation measures	Remarks on Implementation		
At flowering/ fruiting stage	Shallow grey soils	Pearlmillet	Protective irrigation	Use of 8 % kaolin spray			
	Medium deep black soils	Soybean	Protective irrigation, hoeing, mulching	-do-			
		Maize	-do-	-do-			
		Onion	Protective irrigation				
	Deep black soils	Soybean	Protective irrigation				
		Onion	Protective irrigation				

Condition			Suggested contingency measures					
Terminal drought (Early withdrawal of monsoon)			Crop management	<u>Rabi</u> Crop planning	Remarks on Implementation			
	Shallow grey soils	Pearlmillet	In case of poor grain filling harvest for fodder	No rabi crop	-do-			
	Medium deep Soybean black soils		Protective irrigation	Chickpea (Vijay / Digvijay ) / Safflower (Bhima) / Sunflower (SS-56)	ver			
		Maize	-do-	Chickpea (Vijay / Digvijay ) / Safflower (Bhima) / Sunflower (SS-56)				

	Onion		Chickpea (Vijay / Digvijay ) / Safflower (Bhima) / Sunflower (SS- Chickpea (Vijay / Digvijay ) / Safflower (Bhima) / Sunflower (SS-56)	
Deep black	Soybean	-do-	Wheat (Tapovan, Trimbak, Godavari)	
soils	Onion	-do-	Wheat (Tapovan, Trimbak, Godavari)	

#### 2.1.2 Drought - Irrigated situation

Condition			Suggested contingency measures		
Delayed release of water in canals due to low rainfall	Major farming situation	Normal crop/cropping system	Change in crop/cropping system	Agronomic measures	Remarks on Implementation
	Shallow grey soils	Rabi-Sorghum	No change	Phule Anuradha, Phule Vasudha, Maldandi Protective irrigation	Seed source : Central campus MPKV, Rahuri,
	black soils Maiz	Wheat	Wheat (Tapovan, Trimbak, Godavari) and /Chickpea (Vijay, Digvijay, Virat)	In wheat, irrigate at critical stages	College of Agril., Pune, Kolhapur and Dhule
		Maize	African tall, Rarshee, Karveer	Sowing on ridges and furrows	NSC, MSSC,
		Onion	Phule samarth, N-2-4-1	Sprinkler irrigation	
		Chickpea	Vijay, Digvijay, Virat,	As above	
	Deep black soils	Sugarcane	No change	Alternate furrow irrigation/ Trash mulching	

Condition	Suggested contingency measures	

	Major farming situation	Normal crop/cropping system	Change in crop/cropping system	Major farming situation	Normal crop/cropping system
Limited release of water in canals due to low rainfall	Shallow grey soils	Rabi-Sorghum	No change	Phule Anuradha, Phule Vasudha, Maldandi Protective irrigation	Seed source :  Central campus MPKV, Rahuri,
	Medium deep black soils	Wheat	Wheat (Tapovan , Trimbak, Godavari) and /Chickpea (Vijay, Digvijay, Virat)	In wheat , irrigate at critical stages	College of Agril., Pune, Kolhapur and Dhule
	Oı	Maize	African tall, Rajrshee, Karveer	Sowing on ridges and furrows	NSC, MSSC,
		Onion	Phule samarth, N-2-4-1	Sprinkler irrigation	
		Chickpea	Vijay, Digvijay, Virat,	As above	
		Sugarcane	No change	Alternate furrow irrigation/ Trash mulching	
			R		

Condition	Suggested contingency measures				
	Major farming situation	Normal crop/ cropping system	Change in crop/cropping system	Major farming situation	Normal crop/cropping system
Non release of water in canals under delayed onset of monsoon in catchments area	NA				

Suggested contingency measures		
		Suggested contingency measures

Condition	Major farming situation	Normal crop/cropping system	Change in crop/cropping system	Major farming situation	Normal crop/cropping system
Lack of inflows into tanks due to insufficient /delayed onset of monsoon		\$	Such condition is not availab	le	

Condition			Suggested contingency measures			
	Major farming situation	Normal crop/cropping system	Change in crop/cropping system	Major farming situation	Normal crop/cropping system	
Insufficient groundwater recharge due to low rainfall	Shallow grey soils- Open well irrigated	Rabi Sorghum		Protective irrigation		
	Medium deep black soils Open well irrigated	Wheat	Majorly wheat (Godavari,Tapovan, Trimbak) and / Chickpea(Vijay, Digvijay,Virat)	In wheat -Irrigate at critical growth stages. In chickpea - Sprinkler irrigation		
		Onion	No change	Micro Sprinkler irrigation		
		Maize	Maize – Rajrshee, Karveer or Chickpea (Vijay, Digvijay,Virat)	Sowing on ridges and furrows Sprinkler irrigation		
		Chickpea	Vijay, Digvijay, Virat	Sprinkler irrigation		
	Deep black soils Open well irrigated	Sugarcane	No change	Drip irrigation, Paired row planting, alternate furrow irrigation & trash mulching		

### 2.2 Unusual rains (untimely, unseasonable etc)

Condition	Suggested contingency measure			
Continuous high rainfall in a short span leading to water logging	Vegetative stage	Flowering stage	Crop maturity stage	Post harvest
Pearlmillet	Drain out excess water Give second dose of N at optimum soil moisture	Drain out excess water	Harvest at physiological maturity stage	Shift produce to safer place for drying
Soybean	As above	As above	As above	As above
Maize	As above	As above	As above	As above
Onion	As above	As above	As above	As above
Sugarcane	As above	As above	As above	As above
Horticulture				
Grape	Drain out excess water			
Banana	<ul> <li>Draining out excess water</li> <li>Cleaning and maintenance</li> <li>Drenching of orchard – Copper fungicides</li> <li>Spraying with 2% urea and application of fertilizers after flood</li> </ul>			
Pomegranate	<ul> <li>Draining out excess of water from the orchads and basins</li> <li>Cleaning and maintenance of the basins</li> <li>Drenching of orchard –Copper fungicides</li> <li>Treating the stems - 10% Bordeaux paste, <i>Geru</i> paste with systemic insecticide</li> <li>Spraying with 2% urea</li> </ul>			
Mango	Drain out excess water	Drain out excess water	Harvest at physiological maturity	Cold storage or immediate marketing

Heavy rainfall with high speed winds in a short span				
Outbreak of pests and diseases due to unseasonal rains				
Pearlmillet	Insect pest:	Insect pest:	Disease:	-
	Grass hopper-Dusting of 2 %	Blister beetle- Dusting of 2 % methyl parathion 20	Ergot: Seed treatment with 20% brine	
	methyl parathion	kg/ ha	solution	

Soybean	Diseases:	Insect pest:	-	-
	Leaf spot: Spray Maconzeb 75 WP 0.25%	Pod borer: Chlorpyriphos 20 % 2 ml of water		
	Root rot/collar rot- Treat seed with carbendazim + mancozeb (2 g /kg) or Phule Trichoderma 5 g/kg.	<ul> <li>Early sowing in last week of may</li> <li>Use of disease resistant variety (DS-228)</li> <li>Spraying the crop with Propiconazole @ 0.1%</li> </ul>		
Sugarcane	Insect pests:	Insect pests:		-
	10 G Phorate 20 kg/ha or 20%	Top shoot borer: Soil application of 10 G Phorate @ 20 kg/ha or 20% Chloropyriphos @5 lit in 1000 lit of water through water channel  White Wooly aphid: Phorate 10G @15 kg/ha, or spray Methyl dematon 25 EC @ 1.5 ml/L or Diamethoate 30% @1.5ml/L		
Onion	Insect: Thrips: Profenophos @2 ml/ L  Disease: Alternaria/ Cercospora: Mancozeb spray 0.25 % or 0.1 % Carbendazim or 0.25 % chlorothalonil	Chris	-	-
Horticulture				
Grape	Insect:	Disease:	-	-
	Mealy bug: Use sticky traps on trunk and girdle. Spray Malathion 50 EC @ 2 ml / L	Powdery mildew : 80 % wettable sulphur @ 2 g / L of water		

	Verticylum lecani 25 g /10 L of water			
Pomegranate	Insect:  Short hole borer: 400 g Geru + 2.5 ml lindane (20 EC) + 2.5 g  COC mix together and paste should be applied to branches	<ul> <li>Such as – Pests - stem borer, thrips, aphids, nematodes</li> <li>Diseases – Sigatoka, bunchy top, cigar end rot, erwinia rot</li> <li>Remedies</li> <li>Cleaning and maintenance of the orchads</li> <li>Drain out excess water from the orchads</li> <li>Drenching with 0.4 % copper fungicides</li> <li>Staking with available material</li> <li>Sanitation of the affected plants</li> <li>Spray the crops with 0.20 to 0.25 % copper fungicide for control of fungal diseases.</li> <li>Drench 200 ml of solution (15 g Streptocycline + 300 g COC + 300 ml Chlorpyriphos in 100 L of water) per plant.</li> <li>Spraying with Imidachloprid 17.8 SL @ 3-4 ml/ 10 L of water for control of sucking pests.</li> <li>Nematodes management</li> <li>Soil application of Phorate 10 G @ 40 g / basin and Neem cake @ 1-1.5 kg / basin. Planting of marigold around the pomegranate plants and deep summer ploughing</li> </ul>		
Mango	Insect: Hoppers: Cypermetrin 25 EC @ 0.3 ml / L	Diseases-Powdery mildew- Spray wettable sulphur 80 WP 0.2 % or dust 300 mesh sulphur @ 20 kg/ha.  Insect Pests-Hoppers: 50 % carbaryl spray @ 2 g/L or 10 % carbaryl dust @ 20 kg /ha	-	-

### 2.3 Floods : Not applicable

### 2.4 Extreme events: Heat wave / Cold wave/Frost/ Hailstorm /Cyclone: Not applicable

### 2.5 Contingent strategies for Livestock, Poultry & Fisheries

### 2.5.1 Livestock

	Sugge	ested contingency measures		
	Before the event <sup>s</sup>	During the event	After the event	
Drought				
Feed and fodder availability	Motivating the sugarcane and maize farmers to convert green sugarcane and maize tops in to silage by the end of February Sowing of cereals (Sorghum/ Maize/Bajra) and leguminous crops (Lucerne, Horse gram, Cowpea) during North-East monsoon under dry land system for fodder production.  Preserving the Groundnut haulms and soya husk as supplemental fodder during drought  Establishment of fodder bank at village level with available dry fodder (Sorghum/Bajra stover/wheat and paddy straw)  Development of silvopastoral models with Leucaena, Glyricidia, Prosopis as fodder trees and Marvel, Madras Anjan, Stylo, Desmanthus, etc., as under storey grass  Encourage fodder production with fodder varieties of Sorghum – stylo- Sorghum on rotation basis and also to cultivate short-term fodder crops like sunhemp  Formation of village Disaster Management Committee  Capacity building and preparedness of the stakeholders and official staff for the drought/floods	Harvest and use biomass of dried up crops (Sorghum/Bajra,/maize/Chikpea/wheat/Soybean etc.,) material as fodder  Use of unconventional and locally available cheap feed ingredients especially Groundnut cake and haulms for feeding of livestock during drought  Harvest all the top fodder available (Subabul, Glyricidia, Pipol, Prosopis etc) and feed the LS during drought  Concentrate ingredients such as Grains, brans, chunnies & oilseed cakes, low grade grains etc.  unfit for human consumption should be procured from Govt. Godowns for feeding as supplement for high productive animals during drought  Promotion of cultivation of Lucerne, Horse gram as contingent crop and harvesting it at vegetative stage as	Encourage progressive farmers to grow multi cut fodder crops of sorghum/bajra/maize(UP chari, MP chari, HC-136, HD-2, GAINT BAJRA, L-74, K-677, Ananad/African Tall, Kisan composite, Moti, Manjari, B1-7 on their own lands with input subsidy  Supply of quality seeds of Stylo and fodder slips of Marvel, Yaswant, Jaywant, napier, guinea grass well before monsoon  Flushing the stock to recoup  Replenish the feed and fodder banks	

	area Surveillance and disease monitoring network to be established at Joint Director (Animal Husbandry) office in the district Adequate refreshment training on draught management to be given to VAS, Jr.VAS, LI with regard to health & management measures Procure and stock multivitamins & area specific mineral mixture	Identification and quarantine of sick animals Constitution of Rapid Action Veterinary Force Performing ring vaccination (8 km radius) in case of any outbreak Restricting movement of livestock in case of any epidemic Tick control measures be undertaken to prevent tick borne diseases in animals Rescue of sick and injured animals and their treatment Organize with community, daily lifting of dung from relief camps	Undertake the vaccination depending on need Keep the animal houses and milking sheds clean and spray disinfectants Farmers should be advised to breed their milch animals during July-September so that the peak milk production does not coincide with mid summer
Insurance	Encouraging insurance of livestock	Listing out the details of the dead animals	Submission for insurance claim and availing insurance benefit  Purchase of new productive animals

<sup>\*</sup>based on forewarning wherever available

### 2.5.2 Poultry

	Suggested contingency measures				
	Before the event	During the event	After the event		
	Drought				
Shortage of feed ingredients	Storing of house hold grain like maize, broken rice etc, in to use	Supplementation only for productive birds with house hold grain	Supplementation to all survived birds		
	as feed in case of severe drought	Supplementation of shell grit (calcium) for laying birds			
		Culling of weak birds			

Drinking water		Use water sanitizers or offer cool hygienic drinking water	
Health and disease management	Culling of sick birds.  Deworming and vaccination against RD and IBD	Mixing of Vit. A,D,E, K and B-complex including vit C in drinking water (5ml in one litre water)	Hygienic and sanitation of poultry house Disposal of dead birds by burning / burying with lime powder in pit

## 2.5.3 Fisheries/ Aquaculture

	Suggested contingency measures		
	Before the event	<b>During the event</b>	After the event
1) Drought		0.	
A. Capture			
Marine		0-	
Inland (i) Shallow water depth due to insufficient	Proper planning of water storage     Conservation & development of water resources by construction of reservoirs &	Maintenance of dams & reservoirs to avoid leakage & to control theft of water.	<ol> <li>Regular desiltation of reservoirs &amp; dams.</li> <li>Govt. should make laws on water conservation.</li> <li>To develop demand oriented system.</li> </ol>
rains/inflow	<ul> <li>dams.</li> <li>3. Avoid seepage losses by lining the canals.</li> <li>4. Adopt rain water harvest techniques.</li> <li>5. Farmer's organizations, water users &amp; private sectors should be involved in construction, operation &amp; maintenance of irrigation system.</li> <li>6. To make people aware about conservation</li> </ul>	<ol> <li>Proper use of water resources on priority base.</li> <li>Add water in shallow water pond.</li> <li>Use stored water.</li> <li>Use surface water flow.</li> <li>Divert water from unutilized areas.</li> <li>Utilize canal water.</li> <li>Aeration of water in ponds/reservoirs.</li> </ol>	<ol> <li>Govt. should make laws to stop deforestation.</li> <li>Need based monitoring through research plan.</li> <li>Intensive forestation program.</li> <li>Augmentation of surface water flow.</li> <li>Strengthening of water reservoirs.</li> <li>Rain water harvesting.</li> <li>Compensation claims.</li> <li>Prepare vulnerability map and place it to management committee</li> </ol>
	of water.		

	<ol> <li>Critical analysis of long range a Forecast data.</li> <li>Storage of water.</li> <li>A forestation program.</li> <li>Conservation of rivers/reservoir/ponds.</li> <li>Re-excavation of local canals and reservoirs.</li> </ol>		
(ii) Changes in water quality	<ol> <li>Storage of water disinfectant such as chlorine, alum etc. at district level.</li> <li>Prohibit dumping of solid, liquid and waste in water sources.</li> <li>Preparedness with stocks of chemicals, disinfectants and therapeutic drugs.</li> </ol>	Provision of water filtration system for the ponds to overcome the water contamination-     Use disinfectants and therapeutic drugs.     Adoption of bio-remedial measures	<ol> <li>Removal of runoff from land by proper means before decomposition.</li> <li>Supply of water filtration system even after the event &amp; creating awareness in farmers.</li> <li>Need based research data should be generated on water quality.</li> <li>Dumping of solid, liquid and waste in water bodies should be stopped through enactment of legislation.</li> </ol>
B. Aquaculture		, ~	
(i) Shallow water in ponds due to insufficient rains/inflow	<ol> <li>Available resources will be identified and need to be kept ready for each district on the basis of forecasting of insufficient rain.</li> <li>To avoid loss due to seepage, infiltration &amp; leakage by using bentonite, ash, polythene liners etc.</li> <li>Maintain the level of water by pumping water into pond.</li> <li>Critical analysis of long range Forecast data.</li> <li>Storage of water.</li> <li>A forestation program.</li> <li>Conservation of rivers/reservoir/ponds.</li> <li>Re-excavation of local canals and</li> </ol>	<ol> <li>Water resources of the areas will be exploited with planning of proper transport facilities in affected areas.</li> <li>Maintain the level of water to the required depth.</li> <li>Add stored water in shallow water depth.</li> <li>Harvesting of fishes as early as possible to avoid mortality.</li> <li>Use stored water.</li> <li>Use surface water flow.</li> <li>Divert water from unutilized areas.</li> <li>Utilize canal water.</li> <li>Aeration of ponds</li> </ol>	<ol> <li>Available resources need to be listed with adequate transport arrangement.</li> <li>Desiltation of pond bottom.</li> <li>Maintenance of tanks &amp; ponds</li> <li>Need based monitoring through research plan.</li> <li>Intensive a forestation program.</li> <li>Augmentation of surface water flow.</li> <li>Construction of water reservoirs.</li> <li>Adoption of rain harvesting methods.</li> <li>Compensation claims .</li> <li>Prepare vulnerability map and place it to management committee</li> </ol>

	reservoirs.		
(ii) Impact of salt load build up in ponds / change in water quality	<ol> <li>Minimize evaporation losses.</li> <li>Dilution of water if salt load is high.</li> <li>Available resources will be identified &amp; need to be kept ready for each district on the basis of forecasting of insufficient rain to reduce the salinity by trapping available water resources.</li> <li>On the basis of forecasting advising fish farmers for harvesting of marketable fish.</li> <li>Prohibit dumping of solid, liquid and waste in water sources.</li> <li>Preparedness with stocks of chemicals, disinfectants and therapeutic drugs</li> </ol>	Dilution of water or exchange water to avoid salt builds up.     Harvesting the marketable fish to reduce the density.     Use disinfectants and therapeutic drugs.     Adoption of bio-remedial measures	<ol> <li>Trapping the water resources from other places for dilution to reduce salt load.</li> <li>Need based research data should be generated on water quality.</li> <li>Dumping of solid, liquid and waste should be stopped through enactment of legislation.</li> </ol>
